

Our best of both worlds – combining secure delivery of pre-loaded Early Window Content with access to streamed media and services over Wi-Fi

Bluebox empowers airlines to offer the most desirable IFE content, having resolved the security and quality concerns around Early Window Content (EWC) delivery in a Wi-Fi-enabled cabin.

Pre-loaded and Wi-Fi-enabled Portable IFE

Bluebox Hybrid complements and completes wireless streaming solutions on board. A Wi-Fi-enabled version of Bluebox Ai, it provides passengers access to the latest Hollywood content as well as additional media and services streamed over approved Wi-Fi systems.

By securely hosting pre-loaded early window and other content on airline-owned devices, Bluebox Hybrid also helps minimise wireless network traffic and delivers a high-quality passenger experience even if the streaming system is offline. This makes it an ideal premium enhancement to offer passengers.

Specifications

- Secure and approved by all major Hollywood studios to host pre-loaded EWC and access additional media and services over Wi-Fi
- Compatible with all approved streaming systems, including Bluebox's own wireless IFE solutions
- A flexible solution to satisfy requirements, whether revenue generation, service enhancement, or service recovery
- Simple, fast content management system
- Supports multi-language content, subtitles, closed captions and audio descriptions
- Lightweight and resilient custom case option, for enhanced protection and extended battery life
- Easy-swap external battery option for 20+ hours extra operation
